

Model:	Trustream
Version:	V1.01
Issue date:	1 st July 2026
Type:	Public

New Features

-

Fixes

- Headphone output is now active when switching on with headphones already connected.
- Power On Volume Limit level set to -20dB as default.

Additional information

To perform the update, place the "LEAK_TS.bin" upgrade file in the root of a FAT32 formatted USB key.

With the LEAK Trustream switched off at the mains, insert the USB key into the "Update" port.

Press and hold the standby button while switching on at the mains.

The LEAK Trustream will update, and the input source LED's will light quickly in sequence.

Release the standby button.

The update will take a few seconds

The LEAK Trustream will put itself into standby once complete.
